

Ford F-150 pickup—2021 North American Truck of the YearTM

Still, and always, the most reliable natural gas solutions for Ford fleets

Wing Power SystemTM provides fleets with proven technology, now from a company that understands green fleets—because we build, operate, and maintain our own. For more than 10 years, we have engineered, serviced, and installed the most reliable compressed natural gas (CNG) and bi-fuel engines for Ford vehicles. Now, for the first time ever, Wing Power System is part of NVG Global Group, a natural gas powerhouse.

We drive green trucks, just like you

Integrating Wing Power System technology into NVG Global Group is a combination of engineering excellence and hands-on fleet management expertise you won't find anywhere else. We have inspected, serviced, repaired, and built more than 10,000 natural gas systems and currently operate 300 CNG—powered trucks in our transport company. No other technology company owns and operates a fleet using the systems they sell. Engine testing in a lab is one thing, but running your own fleet is a superior practice to validate what we promise. We buy and use what we sell.

Engineered for performance

- » Stainless steel fuel lines, fittings, and injector rails
- » Bi-fuel CNG
- » 17 or 23 gasoline gallon equivalent (GGE) in-bed tank configuration
- » 10 GGE rear tank package available

Backed by quality and service

- » Meets Ford Q185 calibration standards
- » FMVSS—compliant
- » OEM—quality engineering and design
- » EPA certified
- » Wing Power System warranty
- » Nationwide network of trained service technicians
